**I Fact Sheet I** All Porcelain Crowns

## All Porcelain Crowns

Modern ceramic materials (lithium disilicate, Zirconium) give dentist the option of making full crowns containing no metal, which are strong and life-like.

E-max porcelain crowns give the best combination of strength and beauty for front teeth.

Zirconium porcelain crowns are stronger and better for molars.

These all ceramic crowns will not show a dark line by the gum, and look very natural. However, for people with very hard, steep overbites, sometimes porcelain fused to metal crowns can still be a better choice.
