I Fact Sheet I Porcelain Veneers

Porcelain Veneers

Veneers are thin coverings that are placed over the front (visible) part of the tooth. They look like natural teeth. Veneers are be used to correct a wide range of dental issues, such as:

- ◆ teeth that are badly stained and cannot be whitened by bleaching
- ◆ chipped or worn teeth
- ◆ crowded or misshapen teeth
- ◆ uneven spaces or large gaps between the upper front teeth

The amount of tooth preparation required varies with the condition of the teeth. An impression is usually made, and a highly skilled laboratory technician makes he veneers which are permanently cemented onto the teeth on the following appointment.
